23 and 24/11/2016

# Content

- › General aspects on hazardous materials
- › Asbestos specific aspects
- › Product identification and handling
- › Examples

# Hazardous materials

Typical hazardous building materials identified in public buildings in Kosovo:

- Compact fluorescent lamps containing mercury
- Asbestos containing material (e.g. Salomite)

Other hazardous building materials (Example):

- PAK – Polycyclic Aromatic Hydrocarbons, e.g. Tar/bitumen containing products for water proof seals in roof structures, basements, etc.
- Mineral wool installed before 1990..... Under discussion!!!! Not considered hazardous at the moment

The contractor and the supervisor are responsible for waste handling (contractor) and related documentation (contractor and supervisor)

Related key guidelines:

- World Bank: Environmental Management Framework
- Kosovo legislation

# How to handle hazardous material

- Compact flourecent lamps containing mercury
  - Non destructive removal
  - Packed Collection in an interim storage
  - Handing over to the waste collection center for further recycling (to be defined by the employer)
- Asbestos containing materials (e.g. Salonite)
  - Procedure and level of required Health and Safety (H&S) measures depending on the type of asbestos
  - Highest level of H&S measures  
Weakly bound asbestos – sprayed asbestos, asbestos containing cartons, textiles (density – lower than 1,5 kg/dm<sup>3</sup>, asbestos content higher than 25%)
  - Lower level of H&S measures  
Strongly bound asbestos – asbestos cement products, seals (high density and asbestos content lower than 25%)

# Environmental Management Framework

- The environmental management framework is discussed in the tender documents
- Procedures/processes and responsibilities have to be agreed before starting implementation
- Typical responsibilities:

*Construction company: EE civil works and installation activities will be done by authorized companies. They are responsible for full and qualitative implementation of the Environmental Management Plan (EMP) and related Checklists*

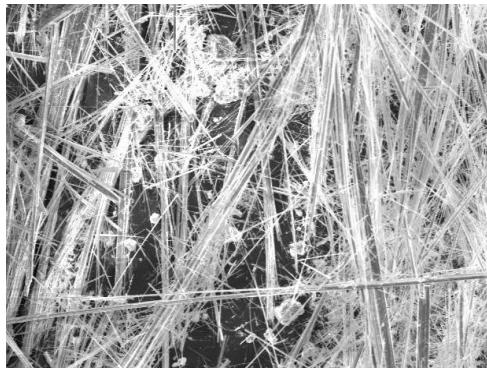

*PIU/Supervisor: supervising independently or jointly the mitigation and environmental protection measures stipulated in Environmental Management Plan.*

# Asbestos deposits

→ Asbestos: natural occurring, fibrous, silicate-material

- „Magic-material“, was used universally.
  - **It is not flammable**, resistant to heat, chemically very stable, excellent electrical and thermal insulation properties, high elasticity and tensile strength, good binder material properties, insoluble by water, chemically not reactive, not molding and is proven to be carcinogenic to humans.
- Types:
  - Chrysotile asbestos (Chrysotile/White asbestos)
  - Anthophyllite asbestos (Krokydolithe/Blue asbestos; Amosite/Brown asbestos, Anthophyllite, Tremolite, Aktinolith)

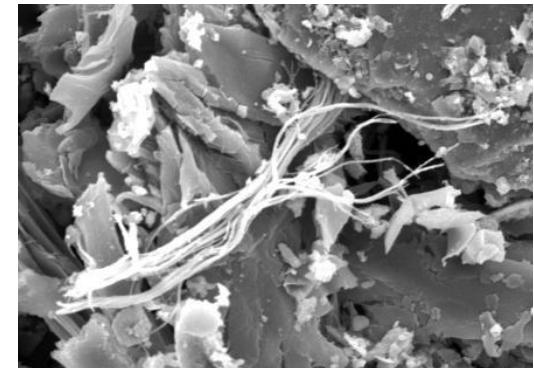

# Naturally occurring asbestos (NOA)

Chrysotile fibres (200x enhanced)

Chrysotile, naturally

Amphibole asbestos fibres (x1000)

- Asbestos fabrication: Economically most important: Chrysotile (~ 95 % of worldwide production)
- 80 % of global asbestos production came from Soviet Union, Canada, South Africa.
- Main deposits in Europe: Corsica & the Balkans
- Kosovo product: Salonite

# Technical functions of asbestos materials

- Fire protection
- Heat insulation/ heat protection
- Acoustic/Noise protection
- Heat accumulator
- Moisture protection

# How to handle asbestos containing material

## Weakly bound asbestos

- Containment of interior areas where removal will occur in a negative pressure enclosure (only for weakly bound ACM)
- Protection of walls, floors and other surfaces with plastic sheeting
- Construction of decontamination facilities for workers and equipment;
- Removal of the ACM using wet methods and promptly placing the material in impermeable containers;
- Final clean-up with vacuum equipment and dismantling of the enclosure and decontamination facilities;
- Disposal of the removed ACM and contaminated materials in an approved landfill

# How to handle asbestos containing material

Strongly bound asbestos – specifically asbestos cement products (Salonite)

- Prohibit any mechanical stress on fiber-cement panels (no drilling, cutting, smashing, cutting, dropping etc.)
- Strive demounting procedure using lifting devices
- Wear appropriate respiratory protection FFP3 and disposable coveralls
- Moisten panels before uninstall;
- Collect panels without destruction
- Pack them plastic foil / e.g. panel big-bags with Asbestos Label
- Orderly Store in an interim storage until transport and disposal at appropriate disposal site.

# Application / ACM products (I)

- Asbestos cement (65 %)

**Corrugated roofs**

Roof sheets

Pipes/Drains

- Panels / Cardboards

Thermal insulation

Insulation strip

# Application / ACM products (II)

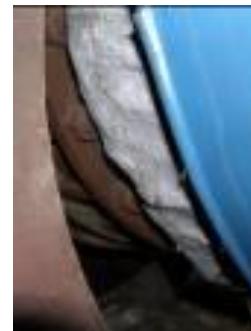

- Sprayed asbestos

Sprayed cement

Intumescent coating

- Textile

Insulation mattresses

cord

# Application / ACM products (III)

- Composite materials (foam)

Gasket rings

„Cushion Vinyle“  
floor tiles (Glue)

- Others

## Profile

[a.helbl@ic-ces.at](mailto:a.helbl@ic-ces.at)

### **Andreas HELBL**

- 25 years of experience as expert in the energy & environmental sector and sustainable development
- Strong experience in energy efficiency in buildings and industries
- Strong team leading capacities and management skills for multinational and interdisciplinary projects
- More than 20 years of international project experience (CEE, SEE, Latin America, etc.)
- Lecturer on environmental due diligence and building certification
- 15 years of leadership in project and business development

**20/10/2011**

Bar spacer/Abstandshalter (2)

A photograph of an industrial facility, likely a refinery or chemical plant. The structure features multiple levels connected by blue-painted metal walkways with railings. Large pipes, some with yellow and black hazard stripes, run along the walkways and through the facility. In the background, there are large storage tanks and more complex piping systems. The overall environment appears dirty and industrial.

A photograph showing an industrial or utility room. On the left, there's a large, dark, curved pipe. Next to it is a vertical metal duct with horizontal louvers. In the center, a vertical pipe runs from the floor to the ceiling. To the right, there's a large, light-colored, curved duct made of asbestos cement. A white metal railing is visible in the foreground, and the walls are light-colored.
